

# DESCH Revox® Gearbox - All in One

"The" drive solution for mobile crushers

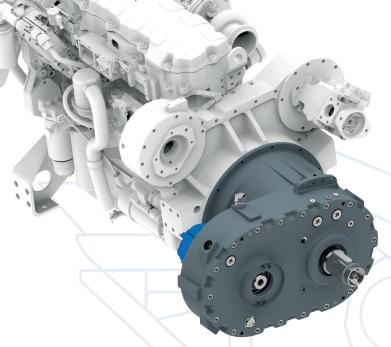

## DESCH Revox® Gearbox

Rising costs for energy and waste disposal, as well as increasing raw material shortages, are calling for innovative, environmentally friendly system solutions. Here, the drive train is of particular significance.

Thanks to the new **Revox**® drive concept, a gear coupling unit, it has become possible to combine an energy-saving direct drive with the versatility of hydraulic drive technology. The core of this drive system is a power-split drive train.

A hydraulic motor mounted either takes care of the starting process to ensure gentle, safe running-up of the crusher rotor. Highly sensitive electronic control systems can be dispensed with.

The option of reversibility is particularly important in jaw cutters. For removing blockages in the crushing jaw as well as with various materials (such as pitumen), it is possible to operate the machine in reverse with the help of a hydraulic motor - and with full cutting torque.

The new **Revox®S** compose a standard gear unit to start-up high rotatory inertia in particular for crushing operation.

Drive systems for constant speed engines are subject to high requirements during acceleration of the rotor.

Due to the high engagement speed of the clutch an increase of the performed friction work raised which lead to a high wear.

The **Revox® S** dispose of a hydraulic soft start system which handle the risk of high friction work by a soft start-up device which means of a hydraulic gear motor. This enables a wear reduced start-up procedure even at high engine speeds up to 1500 rpm.

During operating mode a robust wet clutch transmit the engine torque. The mechanical direct drive system lead to a energy-efficient drive solution.

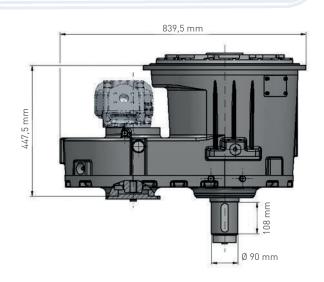

The **Revox®S** is provided with a SAE B-B hydraulic pump connection by default.

# ADVANTAGES Revox® S - Gearbox

- Hydraulic soft start
- Almost wear-free clutch operation
- Mechanical direct drive
- Energy-efficient by a disconnectable start-up motor as standard
- Robust design by standard parts
- Wet operating clutch

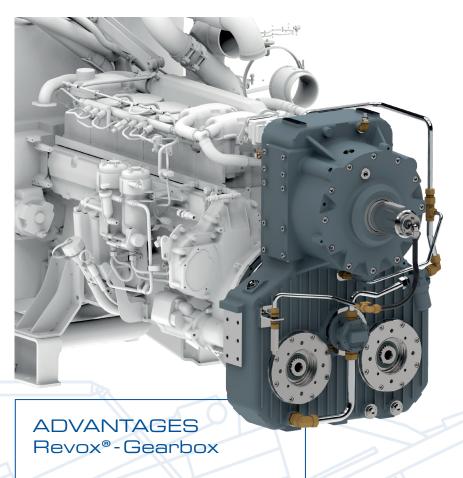

#### Technical data Revox® S

Max. power: 280 kW
Max. torque: 1800 Nm
Idle speed: 800 rpm
Max. speed: 2100 rpm
Ratio hydraulic pump: i = 1,31
Clutch pressure: 40 bar

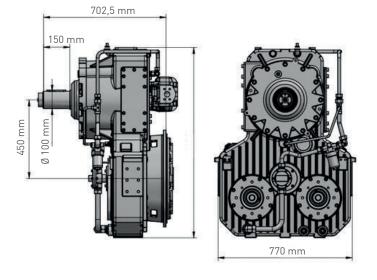

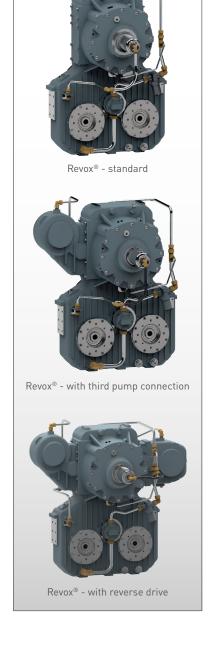

# "The" drive solution for mobile crushers

- Hydraulic soft start
- Almost wear-free clutch operation
- Mechanical direct drive
- Reverse drive option by max. torque
- Disconnectable start-up motor as an option
- Robust design by standard parts
- High availability
- Flexible application
- Wet operating clutch

### Technical data Revox®

400 kW Max. Power: Max. torque: 2500 Nm Idle speed: 800 rpm Max. speed: 2100 rpm Ratio output: i = 1.41Ratio hydraulic pump: i = 0,78Operating pressure: 200 bar Clutch pressure: 40 bar
