DESCH SERVICE

From a single source

Complete system maintenance for the entire drive train
respective to the manufacturer

**Repair and maintenance of the entire drive train on site or
at our service center in Arnsberg, Germany.**

Our Service:

- Removing of all components to be repaired
- Disassembly and cleaning
- Detailed damage analysis and providing an illustrated damage report
- If required, refurbishment of the bearing carriers and sealing surfaces
- Measurements and new production of defective components on our own state-of-the-art production line (turning, drilling and gear cutting on CNC machines)
- Replacement of all wear parts (bearings, seals, screws)
- Assembly using the refurbished parts and new parts
- Test run according to specified parameters
- Return transport, installation and if required alignment of the refurbished unit on site
- If required, we can arrange the mobile crane technology as an added service
- Manufacturer-independent motor repairs

Refurbishment using the example of a stretching gearbox
